Crisp & clear high-definition video and voice connection to link professors in North America to TLN classroom in Europe

Your professor will be a continent away, but you'll be able to interact comfortably and naturally just as if he/she were physically present in the classroom

HD Visual Communications System Solution

High image and sound quality, as well as a stable connection eliminates the need to travel, enabling highly constructive meetings and smooth research.

Distance Learning

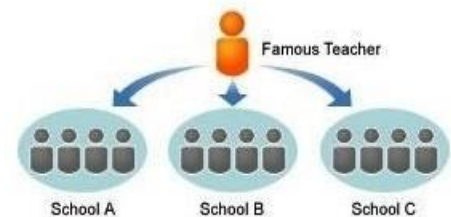

Problem

The number of popular instructors is limited, and frequently those instructors cannot provide lectures at branch schools because of scheduling conflicts. Also, with ordinary videoconference systems, the image quality is so poor that it is difficult to make out the words written on the blackboard.

HD Visual Communications System Solution

It is possible to connect branch schools with popular instructors for remote lessons. The high image quality makes the words written on the blackboard clearly legible, and question-and-answer sessions can be conducted smoothly thanks to high sound quality and a stable connection.
